5.7	Manager.h File Reference	44
	Index	49

1 Hierarchical Index

1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

Employee	3
Manager	21
Executive	14

2 Class Index

2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

Employee	3
Executive	14
Manager	21

3 File Index

3.1 File List

Here is a list of all files with brief descriptions:

Employee.cpp	31
Employee.h	32
Executive.cpp	35
Executive.h	36
lab10x.cpp	39
Manager.cpp	43
Manager.h	44

4 Class Documentation

4.1 Employee Class Reference

```
#include <Employee.h>
```

Inheritance diagram for Employee:

Collaboration diagram for Employee:

Public Member Functions

- [Employee](#) ()
- void [set_name](#) (std::string n)
- void [set_salary](#) (double s)
- double [get_salary](#) () const
- std::string [get_name](#) () const

Private Attributes

- std::string [name](#)
- double [salary](#)

4.1.1 Detailed Description

This is a base class from which we will derive a [Manager](#) class.

Definition at line 8 of file Employee.h.

4.1.2 Constructor & Destructor Documentation

4.1.2.1 Employee()

```
Employee::Employee ( )
```

Default constructor which has an empty name and salary of 0.0

Definition at line 2 of file Employee.cpp.

```
3         : salary (0) , name ( "" )  
4     { }
```

4.1.3 Member Function Documentation

4.1.3.1 get_name()

```
std::string Employee::get_name ( ) const
```

Function returns name

Returns

returns name of [Employee](#)

Definition at line 17 of file Employee.cpp.

```
18 {  
19     return name;  
20 }
```

Here is the caller graph for this function:

4.1.3.2 get_salary()

```
double Employee::get_salary ( ) const
```

Function returns salary

Returns

returns salary of [Employee](#)

Definition at line 5 of file Employee.cpp.

```
6 {  
7     return salary;  
8 }
```

Here is the caller graph for this function:

4.1.3.3 set_name()

```
void Employee::set_name (  
    std::string n )
```

Function which takes a string and sets n to name

Parameters

<i>n</i>	the name of Employee
----------	--------------------------------------

Definition at line 13 of file Employee.cpp.

```
14 {  
15     name = n;  
16 }
```

Here is the caller graph for this function:

4.1.3.4 set_salary()

```
void Employee::set_salary (  
    double s )
```

Function which takes a double and sets s to salary

Parameters

s	the salary of Employee
---	----------------------------------------

Definition at line 9 of file Employee.cpp.

```
10 {  
11     salary = d;  
12 }
```

Here is the caller graph for this function:

4.1.4 Member Data Documentation

4.1.4.1 name

```
std::string Employee::name [private]
```

Definition at line 37 of file Employee.h.

4.1.4.2 salary

```
double Employee::salary [private]
```

Definition at line 38 of file Employee.h.

The documentation for this class was generated from the following files:

- [Employee.h](#)
- [Employee.cpp](#)

4.2 Executive Class Reference

```
#include <Executive.h>
```

Inheritance diagram for Executive:

Collaboration diagram for Executive:

Public Member Functions

- [Executive](#) (std::string d, std::string n, double s)
- void [display](#) () const

4.2.1 Detailed Description

Inherit from [Manager](#) class Add member function display to print the department, name and salary w/ [Executive](#)

Definition at line 10 of file Executive.h.

4.2.2 Constructor & Destructor Documentation

4.2.2.1 Executive()

```
Executive::Executive (
    std::string d,
    std::string n,
    double s )
```

[Executive](#) Constructor which fills in the department, name, and the salary into [Executive](#)

Parameters

<i>d</i>	the department which the Executive manages
<i>n</i>	the name of the Executive
<i>s</i>	the salary of the Executive

Definition at line 2 of file Executive.cpp.

```
3      : Manager (d, n, s)
4  { }
```

4.2.3 Member Function Documentation

4.2.3.1 display()

```
void Executive::display ( ) const
```

assume this will display to terminal: Displays name, department, salary and has [Executive](#) before name

Definition at line 5 of file Executive.cpp.

```
6 {  
7     std::cout << "Executive ";  
8     Manager::display\(\);  
9 }
```

Here is the call graph for this function:

Here is the caller graph for this function:

The documentation for this class was generated from the following files:

- [Executive.h](#)
- [Executive.cpp](#)

4.3 Manager Class Reference

```
#include <Manager.h>
```

Inheritance diagram for Manager:

Collaboration diagram for Manager:

Public Member Functions

- [Manager](#) (std::string d, std::string n, double s)
- void [display](#) () const

Private Attributes

- `std::string` `depart`

4.3.1 Detailed Description

Inherit from [Employee](#) class and add data member to store name of department Add member function display to print the department, name and salary

Definition at line 11 of file Manager.h.

4.3.2 Constructor & Destructor Documentation

4.3.2.1 Manager()

```
Manager::Manager (
    std::string d,
    std::string n,
    double s )
```

[Manager](#) Constructor which fills in the department, name, and the salary into [Manager](#)

Parameters

<i>d</i>	the department which the Manager manages
<i>n</i>	the name of the Manager
<i>s</i>	the salary of the Manager

Definition at line 2 of file Manager.cpp.

```
3      :depart (d)
4  {
5      set_name (n) ;
6      set_salary (s) ;
7  }
```

Here is the call graph for this function:

4.3.3 Member Function Documentation

4.3.3.1 display()

```
void Manager::display ( ) const
```

assume this will display to terminal: Function that displays name, department, and salary of [Manager](#) - uses [get_salary\(\)](#) and [get_name\(\)](#) from [Employee](#)

Definition at line 8 of file Manager.cpp.

```
9 {  
10     std::cout << get_name()  
11     << " manages department : "<< depart << std::endl  
12     << "and makes: $" << get_salary() << std::endl;  
13 }
```

Here is the call graph for this function:

Here is the caller graph for this function:

4.3.4 Member Data Documentation

4.3.4.1 depart

```
std::string Manager::depart [private]
```

Definition at line 30 of file Manager.h.

The documentation for this class was generated from the following files:

- [Manager.h](#)
- [Manager.cpp](#)

5 File Documentation

5.1 Employee.cpp File Reference

```
#include "Employee.h"
```

Include dependency graph for Employee.cpp:

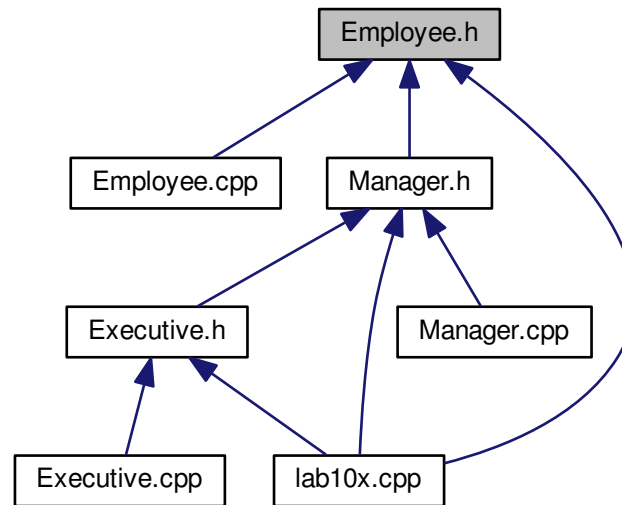

5.2 Employee.h File Reference

```
#include <iostream>
```

Include dependency graph for Employee.h:

This graph shows which files directly or indirectly include this file:

Classes

- class [Employee](#)

5.3 Executive.cpp File Reference

```
#include "Executive.h"
```

Include dependency graph for Executive.cpp:

5.4 Executive.h File Reference

```
#include <iostream>
#include "Manager.h"
```

Include dependency graph for Executive.h:

This graph shows which files directly or indirectly include this file:

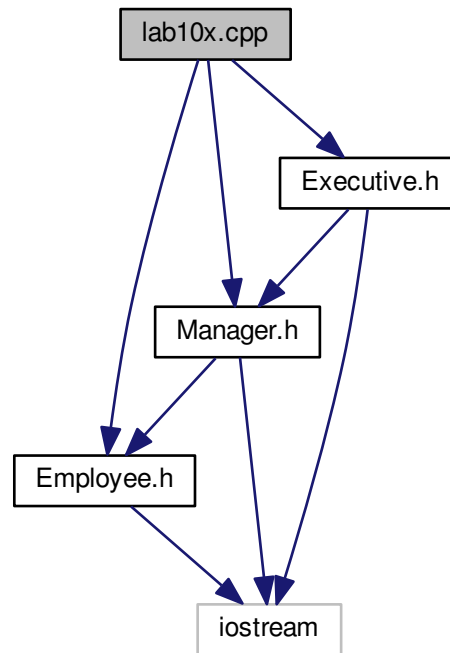

Classes

- class [Executive](#)

5.5 lab10x.cpp File Reference

```
#include "Employee.h"  
#include "Manager.h"  
#include "Executive.h"
```

Include dependency graph for lab10x.cpp:

Functions

- int `main` ()

5.5.1 Function Documentation

5.5.1.1 main()

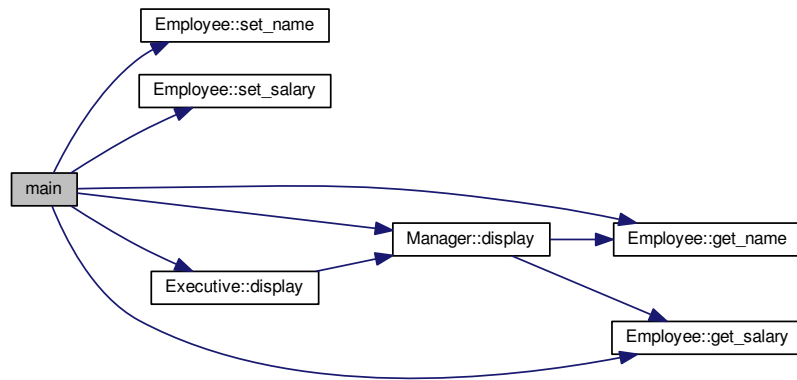

```
int main ( )
```

This creates an [Employee](#) e, [Manager](#) m, and an [Executive](#) ex and outputs their corresponding features.

Definition at line 9 of file lab10x.cpp.

```
10 {  
11     Employee e;  
12     e.set_name("Bob");  
13     e.set_salary(10);  
14     std::cout << e.get_name() << " ";  
15     std::cout << e.get_salary() << std::endl;  
16     Manager m("science", "Bob", 100);  
17     m.display();  
18     Executive ex("hiring", "Joe", 1000);  
19     ex.display();  
20 }
```

Here is the call graph for this function:

5.6 Manager.cpp File Reference

```
#include "Manager.h"
```

Include dependency graph for Manager.cpp:

5.7 Manager.h File Reference

```
#include <iostream>
#include "Employee.h"
```

Include dependency graph for Manager.h:

This graph shows which files directly or indirectly include this file:
